PROFESSIONAL SUMMARY

Results-driven Software Engineering student (CGPA 3.85/4.00) with hands-on full stack development experience spanning frontend and backend technologies including React.js, Node.js, Express.js, and MongoDB. Demonstrated ability to build and deploy responsive, production-ready web applications with REST API integration and real-world problem-solving skills. Seeking a Software Development Intern (Full Stack) role to contribute to impactful engineering projects while deepening expertise in modern JavaScript ecosystems.

TECHNICAL SKILLS

Frontend: HTML5, CSS3, JavaScript (ES6+), React.js, Responsive Web Design

Backend: Node.js, Express.js, REST APIs, Laravel

Databases: MongoDB, MySQL, SQL, Firebase Firestore

Tools & Practices: Git, GitHub, Provider (State Mgmt), OOP, Data Structures & Algorithms, Software Engineering Principles

PROJECTS

Watchify Store — Full Stack E-Commerce Platform

[Live Demo](#) | [GitHub](#)

Laravel, MySQL, PHP, HTML5, CSS3, JavaScript, REST APIs | Deployed on Railway

- Engineered a fully functional e-commerce web application featuring product catalog management, shopping cart, and an admin dashboard, implementing MVC architecture using Laravel and MySQL.
- Designed a normalized relational database schema with SQL supporting product inventory, user accounts, and order management, and built RESTful backend routes with full CRUD operations.
- Deployed the production application on Railway cloud platform, demonstrating an end-to-end software development lifecycle from local development to live deployment.

Weather App — Real-Time API Integration with Serverless Backend

[Live Demo](#) | [GitHub](#)

HTML5, CSS3, Vanilla JavaScript (ES6+), OpenWeatherMap API, Vercel Serverless, Geolocation API

- Built a responsive weather dashboard consuming the OpenWeatherMap REST API via a Vercel serverless backend proxy, securing the API key from client-side exposure.
- Implemented auto-geolocation detection, 5-day forecast, Celsius/Fahrenheit toggle, and recent search persistence using localStorage, delivering a polished end-user experience.
- Applied glassmorphism UI design with CSS media queries for full responsiveness across mobile and desktop, with dynamic weather icons and backgrounds based on live conditions.

Carpool App — Flutter Firebase Ride-Sharing Platform

[GitHub](#)

Flutter (Dart), Firebase Auth, Firestore, Google Maps API, Provider State Management

- Developed a cross-platform ride-sharing mobile app with separate driver and passenger flows — drivers can create and manage rides while passengers search, view, and book available rides.
- Integrated Firebase Authentication (Email/Password + OTP) and Firestore real-time database for live ride updates, user session management, and secure role-based access control.
- Implemented Google Maps API for interactive location picking, route display, and pickup/drop-off point selection, using Provider for scalable state management across screens.

Pocket Journal — Offline-First Mobile Application

[Play Store](#) | [GitHub](#)

Flutter, SQLite, Local Storage | Published on Google Play Store

- Designed and deployed an offline-first personal diary app with SQLite local persistence and full CRUD operations, published on Google Play Store — covering the complete lifecycle from data modeling to production release.

EDUCATION

Bachelor of Science in Software Engineering

Expected: 2027

COMSATS University Islamabad, Wah Campus | 6th Semester | **CGPA: 3.85 / 4.00**

CERTIFICATIONS

Web Development Course — Completed | Full Stack Web Development covering HTML5, CSS3, JavaScript, React.js, Node.js, and REST APIs
